

Shelter

It is amazing to know that shelter is a big part of nature. Most often during the 1860s and the 1870s many first nations moved to the United States and made their shelter. Would you believe that in the United States shelter from the east took over lands and acquired in native people.

It is sad to know that many people were killed in battles over land in the United States. It's scary to know that the Canadian Government wanted a police force in the Canadian west.

Wouldn't you agree that shelter is important to First Nation.

Did you know that First Nation shelter was a tipi? On the tipi there are the primary colors: blue, red, and yellow. Yellow means the sun, red means the earth, and blue means the water and the sky. You may be wondering if there's another symbol that shows something well, there is, there's a symbol on the tipi that shows a story. The most important thing is that, every kind of tipi has its own type of design. You might be interested that the First Nations lived near the Rocky mountains or they lived near the foot hills.

You also might be interested to learn what's inside a tipi. In a tipi there is bison skin. They use this bison fur to sit on. The reason why they need this bison skin is that it will be more comfortable. Interesting fact is that they also use animal skin to build the tipi. Wouldn't you also agree that there's a hole in the top of the tipi so the smoke from the fireplace inside the tipi. This is important because no one needs to smoke.

This is my learning for First Nations shelter.

There are many ways making a shelter

Let me tell you about how all tipis were made from animal skin and in kept the heat. Imagine how the first Nations hunted animals to get the skin for the tipi. Tipi poles were made to hold the tipi and it was called framework. It can also be made from sticks and logs. Surprisingly wooden pins are made to hold the tipis together.

What's so great about smoke flaps well they can be adjusted to let air in and smoke out.

It is amazing to think about that some travelers might make a simple shelter by leaning two poles together against a tree and cover it brush.

Incredibly tipis keep out snow and rain.

Would you believe that tipis don't blow away in the strong wind. For years animal skin were made for goods like making a tent called tipi.

In a sort of funny way tipis were easy to make and take down.
